

Technical Data Sheet

Theta 40

File No. 263805

Theta 40 Series of multi-transducers simultaneously measure several variables of an electric power system and process them to produce 2 or 3 or 4 analogue output signals. 2 or 4 digital outputs are available for signaling limits or power metering. For two of the limit outputs up to 3 measurands can be logically combined.

Special Features

- For all heavy-current power system variables
- Up to 6 outputs (2A + 4D or 4A + 2D or 2A or 3A)
- Input voltage up to 693 V (phase-to-phase)
- Universal analogue outputs (programmable)
- High accuracy: U/I 0.2%, Frequency 0.15% and P 0.25% (under reference conditions)
- Universal digital outputs (meter transmitter, limits)
- AC/DC power supply/universal (24-80V AC/DC or 85-230V AC/DC)
- Windows software with password protection for programming, data analysis, power system status simulation, acquisition of meter data and making settings

Application

Theta 40 for the measurement of electrical variables in heavy current power systems

The Theta Series series of multi-transducers **simultaneously** measure several variables of an electric power system and process them to produce 2 or 3 or 4 analogue output signals. 2 or 4 digital outputs are available for signaling limits or power metering. For two of the limit outputs up to 3 measurands can be logically combined.

The multi - transducers are also equipped with an serial **RS 232** interface to which a PC with the corresponding software can be connected for programming or accessing & executing useful ancillary functions. The usual modes of connection, the types of measured variables, their ratings, the transfer characteristic for each output etc. are the main parameters that have to be programmed.

Ancillary functions include a power system check, provision for displaying the measured variable on a PC monitor, the simulation of the outputs for test purposes and a facility for printing nameplates.

Table 1

Measured variables	Output	Types
Current, voltage (rms), active/reactive/ apparent power cos, sin, power factor RMS value of the current with wire setting range (bimetal measuring function)	2 analogue outputs	Theta M20
	3 analogue outputs	Theta M30
	2 analogue outputs and 4 digital outputs or 4 analogue outputs and 2 digital outputs	Theta M24
Slave pointer function for the measurement of the RMS value IB Frequency		Theta M42
	4 analogue outputs and bus RS 485 (MODBUS)	Theta M40 *
Average value of the currents with sign of the active power (power system only)	Data bus (LON) M00	Theta M00 *
	Bus RS 485 (MODBUS)	Theta M01 *
	4 analog output with RS 485, optional display	Theta Trans *

* Refer dedicated data sheet for complete product details.

Table 3 : Symbols and their meaning

Symbols	Meaning
X	Measured variable
X0	Lower limit of the measured variable
X1	Break point of the measured variable
X2	Upper limit of the measured variable
Y	Output variable
Y0	Lower limit of the output variable
Y1	Break point of the output variable
Y2	Upper limit of the output variable
U	Input voltage
Ur	Rated value of the input voltage

Table 3 : Symbols and their meaning

Symbols	Meaning
U 12	Phase-to-phase voltage L1 - L2
U 23	Phase-to-phase voltage L2 - L3
U 31	Phase-to-phase voltage L3 - L1
U1N	Phase-to-neutral voltage L1 - N
U2N	Phase-to-neutral voltage L2 - N
U3N	Phase-to-neutral voltage L3 - N
UM	Average value of the voltages (U1N + U2N + U3N) / 3
I	Input current
I1	AC current L1
I2	AC current L2
I3	AC current L3
Ir	Rated value of the input current
IM	Average value of the currents (I1+ I2 + I3) / 3
IMS	Average value of the currents and sign of the active power (P)
IB	RMS value of the current with wire setting range (bimetal measuring function)
IBT	Response time for IB
BS	Slave pointer function for the measurement of the RMS value IB
BST	Response time for BS
ϕ	Phase-shift between current and voltage
F	Frequency of the input variable
Fn	Rated frequency
P	Active power of the system $P = P1 + P2 + P3$
P1	Active power phase 1 (phase-to-neutral L1 - N)
P2	Active power phase 2 (phase-to-neutral L2 - N)
P3	Active power phase 3 (phase-to-neutral L3 - N)
Q	Reactive power of the system $Q = Q1 + Q2 + Q3$
Q1	Reactive power phase 1 (phase-to-neutral L1-N)
Q2	Reactive power phase 2 (phase-to-neutral L2-N)

Symbols	Meaning
Q3	Reactive power phase 3 (phase-to-neutral L3-N)
S	Apparent power of the system $S = \sqrt{I_1^2 + I_2^2 + I_3^2} \cdot \sqrt{U_1^2 + U_2^2 + U_3^2}$
S1	Apparent power phase 1 (phase-to-neutral L1-N)
S2	Apparent power phase 2 (phase-to-neutral L2-N)
S3	Apparent power phase 3 (phase-to-neutral L3-N)
Sr	Rated value of the apparent power of the system
PF	Active power factor $\cos \phi = P/S$
PF1	Active power factor phase1 P1/S1
PF2	Active power factor phase2 P2/S2
PF3	Active power factor phase3 P3/S3
QF	Reactive power factor $\sin j = Q/S$
QF1	Reactive power factor phase1 Q1/S1
QF2	Reactive power factor phase2 Q2/S2
QF3	Reactive power factor phase3 Q3/S3
LF	Power factor of the system $LF = \text{sgn}Q (1 - PF)$
LF1	Power factor phase 1 $\text{sgn}Q1 (1 - PF1)$
LF2	Power factor phase 2 $\text{sgn}Q2 (1 - PF2)$
LF3	Power factor phase 3 $\text{sgn}Q3 (1 - PF3)$
c	Factor for the intrinsic error
R	Output load
Rn	Rated burden
H	Power supply
Hn	Rated value of the power supply
CT	c.t. ratio
VT	v.t. ratio

Technical data

Reference conditions

Ambient temperature	+ 23 °C ± 1 K
Pre-conditioning	30 min. acc. to DIN EN 60 688 Section 4.3, Table 2
Input variable	Rated useful range
Power supply	H = H _n + 1 %
Active/reactive factor	cosφ=1 resp. sin = 1
Frequency	50 ... 60 Hz, 16 2/3 Hz
Waveform	Sinusoidal, form factor 1.1107
Output load	DC current output: $R_n = \frac{7.5 \text{ V}}{Y_2} \pm 1\%$ DC voltage output: $R_n = \frac{Y_2}{1 \text{ mA}} \pm 1\%$
Miscellaneous	DIN EN 60 688

* Basic accuracy 0.5 c for applications with phase-shift

Duration of the measurement cycle	Approx. 0.25 to 0.5 s at 50 Hz, depending on measured variable & programming
Response time	1 ... 2 times the measurement cycle
Factor c (the highest value applies)	
Linear characteristic	$c = \frac{1 - \frac{Y_0}{Y_2}}{1 - \frac{X_0}{X_2}}$ or $c = 1$
Bent characteristic $X_0 \leq X \leq X_1$	$c = \frac{Y_1 - Y_2}{X_1 - X_2} \cdot \frac{X_2}{Y_2}$ or $c = 1$
$X_1 \leq X \leq X_2$	$c = \frac{1 - \frac{Y_1}{Y_2}}{1 - \frac{X_1}{X_2}}$ or $c = 1$

Fig. 3. Examples of settings with linear characteristic.

Fig. 4. Examples of settings with bent characteristic.

Power Supply →

AC voltage	100, 110, 230, 400, 500 or 693 V, + 10%, 45 to 65 Hz Power consumption approx. 10 VA

Programming connector on transducer

Interface	RS 232 C
DSUB socket	9-pin
	The interface is electrically insulated from all other circuits

Influencing quantities and permissible variations

Acc. to DIN IEC 688

Technical data

Table 7 : Analogue output ➞

Output variable Y	Impressed DC current	Impressed DC voltage
Full scale Y2	see "Ordering information"	see "Ordering information"
Limits of output signal for input overload and/or	see "Ordering information"	see "Ordering information"
R=0	1.25 Y2	40 mA
R → ∞	30V	1.25 Y2
Rated useful range of output load	$0 \leq \frac{7.5 \text{ V}}{Y2} \leq \frac{15 \text{ V}}{Y2}$	$\frac{Y2}{2 \text{ mA}} \leq \frac{Y2}{1 \text{ mA}} \leq \infty$
AC component of output signal (peak-to-peak)	≤ 0.005 Y2	≤ 0.005 Y2

The outputs A, B, C and D may be either short or open-circuited. They are electrically insulated from each other and from all other circuits (floating)

All the full - scale output values can be reduced subsequently using the programming software, but a supplementary error results. The hardware full-scale settings for the analogue outputs may also be changed subsequently. Conversion of a current to a voltage output or vice versa is also possible. This necessitates changing resistors on the output board. The full-scale values of the current and voltage outputs are set by varying the effective value of two parallel resistors (better resolution). The values of the resistors are selected to achieve the minimum absolute error. Calibration with the programming software is always necessary following conversion of the outputs. Refer to the Operating Instructions.

Caution : The warranty is void if the device is tampered.

Digital outputs, pulse outputs, limit outputs ➞

The digital outputs conform to DIN43 864. The pulse width can be neither programmed nor is there a hardware setting.

Type of contact	Open collector
Number of pulses	see "Ordering information"
Pulse duration	≥ 100 ms
Interval	≥ 100 ms
Power supply	8 ... 40 V
Output current	ON 10 ... 27 mA QFF < 2 mA

System response
Accuracy class
